

# An Introduction to Data Centre Risk

The only online course directly aimed at reducing risk in the data centre.

## Analyse, Reflect, Solve

Our team have a wealth of experience related to assessing and solving problems relating to risk in the data centre and this hands-on experience has been used in the creation of the Introduction to Data Centre Risk online course.

## Why take this course?

Risk is a fact of life in the data centre environment. Downtime can lead to severe financial and reputational damage. At the end of the Operational Intelligence Data Centre Risk course, you will be better prepared to identify and address specific areas of risk before they put your business, and potentially your job, in jeopardy.

Specifically designed to maximise learning whilst taking only a short time to complete, the data centre risk course is based on real case studies and exercises. This approach enables a solid, hands-on foundation in risk identification and avoidance, and will ensure you develop the necessary skills to minimise risk in your own facility.

## operational<sup>®</sup> Intelligence

Optimisation through knowledge

## Objectives

- > Assess the causes of data centre failures (Infrastructure and Operations)
- > Assess how different variables impact on theoretical concepts
- > Analyse the human element associated with risk
- > Recognise types of system topologies
- > State the relationship between design complexity and desired training
- > Analyse the business context of risk

**Who should take this course? This course is aimed at anyone involved in the data centre industry including data centre clients, operators, managers, designers, vendors, contractors and suppliers.**

Course cost:  
**£200**

Duration:  
**2.5 hours**
